

Musical Instruments

Main purpose - To distinguish between sounds made by instruments and to remember sound patterns.

Show the children a few simple musical instruments, such as a triangle, tambourine and a bell. Have each child draw a picture of each instrument on one card or piece of paper. With the children facing away from you, play the instruments in a different order each time and have the children hold up the cards in the order in which you played them. Start with one sound and work your way up to three.
